

HOLDS CATALOGUE 2016  
SUMMER EDITION

Our climbing holds are made with Polyurethane.

Within the last five years we have developed our own mixture of polyurethane - 360PU.

Four different components are mixed and molded in a highly controlled environment of 360HOLDS production.

The mixing machine is designed to prevent air bubbles, which works in favour of the quality of our products.

The material mixture was quality control tested by several laboratory tests to reach maximum flexibility, but at the same time optimum durability and resistance of the climbing hold surface.

ART LINES

# Technical specification:
