# NEW 2018 - THE DUNE

*Modern indoor bouldering is evolving and the use of larger, cleaner holds à la Dune is shifting the setting style away from brute strength orientated moves towards problems that place a greater reliance on technique and coordination, in addition to encouraging experimentation with movement.*

*With Dune, the frustration of not being strong enough is no longer always the barrier to success – We reckon it's hard to argue against the more engaging and playful experience that this climbing hold style offers the contemporary climber.*

*Each line offers a wide variety of shapes making it easy to create entirely new routes.*

# Technical data

## PE - Polyester CRISTOBALITE

We chose cristobalite resin for the manufacture of our climbing holds. A precise mix of quartz powder for the resin mortar. A touch close to the rock with unique grip sensations thanks to its hardness. PE resin is cheaper. On the other hand, it is much more stable in U.V. AGRIPP has the latest «Safety Holds» technology and fulfills the latest European standards regarding these.

## PU - Polyuréthane DANNOMOND

Characteristics like higher wear resistance, bright colours, dry soft texture and superior strength make it the first choice material for Climbing holds. Route setters and gym owners alike appreciate the long life and ease of route setting it imparts in the holds.

## Insert

Insert INOX - UBI (Universal Bolt Insert) increases the resistance capacities up to 300%. Agripp holds are therefore much more resistant. This system is integrated into all Agripp holds. This way, to use M10 screws with cylindrical heads. This system guarantee has been specifically designed to guarantee a stable and resistant Attachment.

## Hollow back

At Agripp we are very concerned about global warming and climate change. We believe our composite outlet manufacturing technique contributes to the common effort of minimizing the use of fossil natural resources and minimizing emissions, using 5 times less raw material and producing the climbing holds that have the longest life in the market.

Most holds from size L are reduced. We signed to have this customized counter-shape to make them lighter for use of the roadsetter and save time and energy. For to focus only on the road.

## Maintenance

When the holds are screwed to a wall and used regularly, it is common for magnesia and rubber slippers to soil them. In the long run, this can affect the quality of grain adhesion. We advise our customers to clean the outlets before reuse and check their condition after a long period of use.

# Volumes

Agripp volumes are unique in their composition with polyester resin and fiberglass. This procedure makes it possible to have large, light, thin and strong shapes. This procedure allows to have fine shapes with a good friction for a climbing sensation. Fixing this done with wood screws.

## Washers

Stainless Steel washers will be now used in every of our climbing holds and volumes fiberglass so screw holes don't wear out with multiple use and the load on a bolt is spread a little more evenly. It is recommended that you do use set screws in each hold. If there is more than one hole then please use it as this will eliminate any flex in the hold.

We have even improved the method of implementing the washers inside the fiberglass ( now washers are between fiberglass layers and it is only visible the

## Materials, Normes, Inserts, Design, Colours and Orders

Agripp we are constantly looking for better materials which will give us more strength and durability coupled with better value for money. We believe we have found the best material we can at present but will continue to search for better. Our PU has the best balance of weight, strength and durability on the market. We enhance the surface durability buy post curing every single hold.

European standard - EN 12572-3

IFSC Authorised Macros Producer

## Agripp fiberglass

Born from the need to respond to the ever-increasing demand for volumes. In this spirit, Agripp to develop a range of 10 volumes to meet the need for routing to achieve the best possible volumes in the climbing market. Whether it's lead or bouldering. Agripp opens the way. Passionate about climbing, we are always looking to improve our products. We can offer you all RAL colors as well as fluorescent colors.
