Routesetting Tools

Climbers create

We all are part of a community. The climbing community. That's why we all come together – climbers, boulderers, route setters, shapers, trainers, and more – to develop, design, and produce new products for you. From the community, for the community.

Our goal is to offer a complete package for route setters, gym owners and managers to simplify processes efficiently and to guarantee ideal equipment. So we can allow more time for the real thing: Routesetting and climbing!

ABOUT COMMUNITY CLIMBING

WHO ARE WE AND WHAT DO WE DO?

The basic idea of Community Climbing Equipment is to design holds for the community by the community. Together we can create grips for everyone - with a special emphasis on a broad variety we have simple grips for beginners and advanced climbers but also for high-end equipment. With those thoughts in mind, we cooperate with many well-known route setters, coaches and athletes, be it international, national or regional.

You have something in your mind that you want to create? We give you the opportunity to realize your own ideas and design your own climbing line. All in the spirit of the community. People of the climbing community like Jacky Godoffe, Ingo Filzwieser, Julius Kerscher and others are already designing incomparable holds together with us.

SCOOPS

ABOUT THE SERIES

The Scoop series, a shape by Joseph Wetzel, with 140 PE holds offers a selection of medium to small holds and footholds. The holds vary from very small to medium, from small crimps to very good jugs, some more or less undercut.

The set offers very varied holds and footholds for a small budget, with which not only in the bouldering gym, but also in the climbing gym many varied boulder and routes can be setted. Community Climbing Equipment developed this set for a small budget — ideal also for a home wall.

FRENCH CONNECTION

ABOUT THE SERIES

The set French Connection, shaped by Julius Kerscher, includes more than 130 PE holds, aimed mainly at amateur sports. It is very functional and has everything: you can screw it to the outer wall, spax it, it has finger holes, bars, small and medium holds, XL-sloper, micro and nano jugs of course.

This series is complemented by small crimps and a variation of footholds so that even in difficult terrain easy bouldering and routes are feasible. This set offers many design options and is not only varied but also visually very appealing —the shapes are reminiscent of croissants, creating a humorous link to French climbing areas.

CRESCENTS

ABOUT THE SERIES

The Crescent series has currently been expanded up to 186 holds. Their aesthetic crescent shape can be combined in creative ways and has many applications in the light to heavy or more complex difficulty range.

In addition to a variety of small spax, the set has different large to small jugs, crimps, various footholds ... and even giga jugs. The PE holds can also be combined with the Crescent Macros.

CRESCENTS MACRO

ABOUT THE SERIES

The Crecent Macros are the perfect complement to the Crecents holds set. The ten different macros are optionally available in dual or mono texture, as a generous jug or beastly sloper. With the combination of both holds, an even wider range of difficulty can be achieved and also far more interesting and varied bouldering and climbing routes.

Furthermore, the sustainability concept is impressive: The basic bodies of the Macros are manufactured in the deep-drawing process with recycling material in the Blocz production facility in Chemnitz.

WOODYS

ABOUT THE SERIES

Born from the idea of bringing a hold to the wall, known as a training tool, the set Woody Balls consists of halved or quartered wooden balls. The special feature: their uniqueness!

Each hold is made of a different piece of wood, their grain is highlighted by a clear varnish. In order not to compete with the color of the wood, the textured inner surfaces are available only in white or black. The set is designed to provide enough holds and footholds in different sizes to guarantee a diversified route setting!

Your wish is our demand
- you can either order the
whole set or on request we
will put together a set of
your own choice.

ROUTESETTING TOOLS

Set your goals! We will provide you the necessary tools to reach them!
Screws, ear protectors, bits, bit holders, wall protectors... Tools that make the work in routesetting much easier!

If you always have the suitable tools at hand, you can let your own energy flow into the creativity of route setting without worrying about the material or safety:
Made by the community - made for the community.
