

Cleaning with bluewash extreme

Guide to hold cleaning in 3 steps with "bluewash extrem" especially for heavily soiled small steps

1. wetting the grips with clear water
 - in the immersion bath
 - shower head
 - water hose
 - high pressure cleaner

The better the pre-treatment, the longer the bath lasts in step 2, handles are not slippery at the end and can be climbed immediately.

2. immersion of holds in bluewash extreme solution
 - in immersion bath approx. 5-7 minutes, mixing ratio 1:20
 - in ultrasonic approx. 5-10 minutes, mixing ratio 1:40
 - dishwasher (after consultation with the machine manufacturer), mixing ratio 1:100

*If the effect decreases, it can be readjusted with bluewash extreme.
It is not necessary to prepare a new bath, unless it would be worthwhile from the quantity.*

3. rinse with clear water
 - with high pressure cleaner after immersion bath
 - with shower head after ultrasound or rinsing machine
 - with water hose after ultrasound or dishwasher - in immersion bath after ultrasound or dishwasher

Procedure for wooden volumes or large GRP handles

Since wood volumes and closed cell volumes must not be immersed in liquids and some GRP handles may be too large, we proceed as follows:

1. mix a 1% solution

- with the help of the outlet tap, pour some blue water into the spray bottle or pump sprayer and fill up with water.

2. wet the handles or volume with water.

- Shower head
- Water hose
- Pressure washer

3. spray on the bluewash extrem solution

- and let it work for up to 10 minutes depending on the degree of soiling
- in case of extreme soiling, rub in the cleaner mechanically with a brush

4. rinse with clear water

- Rinse off the volumes and handles with the high-pressure cleaner or a brush and clear water.

Procedure for climbing and bouldering walls

1. Mixing a 0.1% solution

- in approx. 5ltr. Add about 5ml bluewash extreme.

2. cleaning of the walls

- dip the brush into the solution let it drip off a little bit so that it is not too wet and brush off the wall

3. rub the walls

- rub the wall with a towel or similar to absorb the dirt

Since the concentration of the cleaner here is very low, rinsing with clear water is not necessary.

Procedure for cleaning the floor

- **Mixing of a 0.5% solution** for mop water
- **Mixing of a 0.02% solution** with a cleaning machine Caution!

Not suitable for linoleum floors!
