▶ What size options are available? **ORIGINAL LAYOUT**  
**HOMEWALL LAYOUT**

▶ What angles can I choose?

You can install your board at a fixed angle or smoothly move it to your desired position with the push of a button. You have the option of a range of either 50° or 75°. With these electrically adjustable Kilter Boards you get a display that always shows you the current angle.

▶ What is the difference between **Original Layout** and **Homewall Layout**? And what hold sets are available?

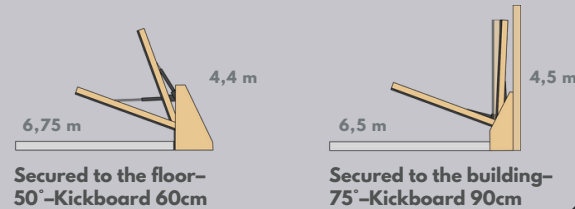

The Original Layout, available in four different sizes, offers the best for a diverse audience in your facility. It includes an extensive hold set with many different sized holds that are already optimally selected, ensuring that everyone, from beginners to professionals, can have fun and success. The Homewall Layout is available in four smaller sizes and provides smaller, more technical holds. Especially small edges require more technique and are more challenging to climb, making the board comparatively less steep. Two different hold sets are available for the Homewall Layout to provide the best possible adaptation to your skills. If you wish, we can mill the hold positions into the panel, which can save you a lot of time during installation.

▶ What requirements must my building meet? And how much space do I need?

There are several ways to integrate your Kilter Board into and within your building. Typically, we recommend attaching the board to existing building structures. Alternatively, it can be anchored to the floor.

The freestanding frame provides even more versatility, such as outdoor use in front of the facility. In this case, we provide the frame with a 20 cm high, structurally relevant substructure, which also showcases the board. Space requirements depend on your chosen Kilter Board, available angles, and, of course, the attachment possibilities in the building. We recommend extending the mat on both sides by 2 meters wider than the board.

Two examples on the Kilter Board 10x12':

▶ My colors and my logo!

Your design completes your Kilter Board frame. Share your preferences with us, and we will paint your Kilter Board in your favorite color. But that's not all—we'll further personalize the frame by painting your logo on the front and adding elements of your corporate design or other details to the frame. For the final touch, we offer you a choice of cladding that elegantly encloses the back of the Kilter Board frame—it not only looks good, but it also enhances safety. Your individual masterpiece, tailor-made for you.

▶ Can I do the installation myself?

Yes! If you and your team are skilled in craftsmanship, the frame can be set up in one day.

▶ What about the mat?

Our matching bouldering mat provides reliable protection for unforeseen falls. Even from maximum heights, it cushions falls gracefully. You have the option to customize the surface of your mat: choose between carpet or PVC. Many RAL colors are available for the PVC surface. Additionally, an entrance carpet strip can be optionally attached to your Kilter Board.
