60 Route Setting Tools

Climbers create

Community Climbing Equipment is built on a simple but powerful idea: climbing holds designed for the community, by the community. We are all part of this climbing world, and that is why we have joined forces—climbers, boulderers, route setters, shapers, trainers, and more—to create high-quality climbing equipment accessible to everyone.

To achieve this, we collaborate with renowned route setters, coaches, and athletes to ensure our products meet the highest standards. Our goal is to provide a complete solution for route setters, gym owners, and managers, helping streamline processes and deliver the best equipment possible. That way, everyone can spend more time on what matters most: setting routes and climbing!

ABOUT COMMUNITY CLIMBING EQUIPMENT WHO ARE WE AND WHAT DO WE DO?

The basic idea of Community Climbing Equipment is to design holds for the community by the community. Together we can create grips for everyone—with a special emphasis on a broad variety we have simple holds for beginners and advanced climbers but also for high-end equipment.

With those thoughts in mind, we cooperate with many well-known route setters, coaches and athletes, international, national or regional.

Do you have ideas for climbing holds or macros that you have always wanted to bring to life? We give you the opportunity to focus on the creative side we take care of the rest! From mold making to financing to distribution, we have got it covered. Your role is to shape your vision, and you will be the face of your own hold line, creating something unique that will inspire and excite climbers everywhere.

And the best part? You will get a cut of the profits for every hold sold from your line! Whether you have previous shaping experience or just feel like experimenting creatively, we welcome your ideas and will support you in bringing them to life. Gregor shaping the new line SLYCERS

ABOUT THE SERIES

This new hold and macro series stands out with its simplicity! Featuring 110 PE holds and 9 macros made from recycled plastic, the edges, curves, and sizes seamlessly blend together. On one side, you'll find generously grippable jugs in an array of sizes, while the other side boasts challenging edges and crimps that will put your skills to the test. This clever design allows you to create everything from straightforward routes to intricate challenges.

ABOUT THE SERIES

This new hold and macro series stands out with its simplicity! Featuring 110 PE holds and 9 macros made from recycled plastic, the edges, curves, and sizes seamlessly blend together. The macros in the series are characterized by their slopy edges and complement the wide range of holds. The shapes of their outer lines are coordinated and ensure that you can play beautifully with them when setting routes.

ABOUT THE SERIES

The new line Monzos, inspired by the rock type Monzogranite, stands out with its texture, akin to those found in nature. Soft shapes meet hard structures, turning dreams on artificial climbing walls into reality! With 152 holds and footholds made from PE in all sizes, these holds leave nothing to be desired: pockets, jugs, slopers, and crimps bring the natural climbing experience into the climbing gym. The Monzos are perfect for diverse route setting, especially in easier grades. However, their thoughtful design allows them to be easily adjusted to suit any difficulty level and terrain, making this hold series a true all-rounder and a visual standout!

ABOUT THE SERIES

The Scoop series, a shape by Joseph Hoffmann, with 140 PE holds offers a selection of medium to small holds and footholds. The holds vary from very small to medium, from small crimps to very good jugs, some more or less undercut. The set offers very diverse holds and footholds for a small budget, with which not only in the bouldering gym, but also in the climbing gym many varied boulder and climbing routes can be set. Community Climbing Equipment developed this set for a small budget—also ideal for a home wall.

ABOUT THE SERIES

The set French Connection, shaped by Julius Kerscher, includes more than 130 PE holds, aimed mainly at amateur sports. It is very functional and has everything: you can screw it to the outer wall, it has finger holes, screw-ons, bars, small and medium holds, XL-sloper, micro and nano jugs of course. This series is complemented by small crimps and a variation of footholds so that even in difficult terrain easy bouldering and climbing routes are feasible. This set offers many design options and is not only varied but also visually very appealing the shapes are reminiscent of croissants, creating a humorous link to French climbing areas.

ABOUT THE SERIES

The Crescents series has currently been expanded up to 186 holds. Their aesthetic crescent shape can be combined in creative ways and has many applications in the light to heavy or more complex difficulty range. In addition to a variety of small screw-ons, the set has different large to small jugs, crimps, various footholds... and even giga jugs. The PE holds can also be combined with the Crescent Macros. With the combination of both holds and macros, an even wider range of difficulty can be achieved and also far more interesting and varied bouldering and climbing routes can be set.

ABOUT THE SERIES

The Crescent Macros are the perfect complement to the Crescents holds set. The ten different macros are optionally available in dual or full texture, as a generous jug or beastly sloper. With the combination of both holds and macros, an even wider range of difficulty can be achieved and also far more interesting and varied bouldering and climbing routes. Furthermore, the sustainability concept is impressive: The basic bodies of the macros are manufactured in the deep-drawing process with reycling material in the Blocz production facility in Chemnitz.

Re S

ABOUT THE SERIES

Born from the idea of creating more sustainable climbing holds for gyms and bouldering walls, these wooden holds are made from renewable materials, with wood being the natural choice for a greener approach. Not only are they environmentally friendly, but they also offer a striking visual contrast to standard single color holds, making them stand out in any climbing environment. The shapes are inspired by classic campus board designs, but have been thoughtfully expanded to provide more versatility and challenge. A standout feature is the "cut-off balls," which add a unique element perfect for topping off holds in an innovative and fun way. Experience the beauty and sustainability of wooden holds and bring a fresh look and feeling to your climbing wall!

Your wish is our demand —you can either order the whole set or on request we will put together a set of your own choice.

SAQ00M

ABOUT THE SERIES

BCCE

Our Community Plates are versatile panels that can be easily installed on flat surfaces like volumes or wall structures to alter the existing texture in no time! The new Plates are a game changer in route setting. Whether on wooden volumes or walls, these plates turn any textured surface into a no-texture zone, adding fresh elements to your boulder and routes quickly and efficiently. The set includes seven plates of various sizes and simple geometric shapes, suitable for many volume sizes and capable of diverse combinations. The plates are inspired by the ancient Chinese puzzle game "Tangram" (also known as the Seven Board). The basic shape is a square, from which the seven geometric shapes are derived. These shapes can be used to create countless patterns and structures, both in the puzzle game and in route setting!
